ABSTRACT OF THE DISCLOSURE

A fluorine gas generator is provided with which the gases used and/or generated, in case of leakage thereof, can be prevented from mixing together as far as possible and, even in case of gas leakage into the outside of the generator system, the leakage gas can be treated safely and in which the maintenance, exchange and other operations are easy to carry out. The generator comprises a box-shaped body containing an electrolyzer for fluorine gas generation, and the box-shaped body is divided into two or more compartments, including a compartment containing the electrolyzer.

Elected Drawing: Fig. 1.

[Description of the Reference Numbers]

1Electrolyzer

- Electrolytic bath 2
- Anode chamber 3
- Cathode chamber 4
- Anode 5
- Cathode 6
- Water heating device 12
- Warm water jacket 13
- HF adsorption column system (second adsorption means) 14
- HF adsorption column 14a
- HF adsorption column 14b
- HF adsorption column system (first adsorption means) 15
- HF adsorption column 15a
- HF adsorption column 15b
- Buffer tank (reservoir means) 20
- Compressor (pressurizing means) 21
- Discharge port for the fluorine gas 22
- Discharge port for the hydrogen gas 23
- HF feeding line 24
- HF inlet 25
- Transporting member 45
- Transporting member 46
- Transporting member 47
- Box-shaped body 100
- First compartment 101
- Second compartment 102
- Third compartment 103
